

As is common in the hair care industry, periodically we make minor updates to some ingredients in a small number of products. We do this to improve quality, enhance the performance of the product or to comply with the latest regulatory requirements. When preservatives or fragrances are updated, the updated formula is subject to rigorous performance and safety testing again to ensure it meets industry and our own high-quality standards and regulatory requirements. We know that ingredients are very important to our curly consumer, so we declare all ingredients on our product labels in compliance with the requirements of the US Food and Drug Administration. As such, any ingredient updates are reflected directly on product packaging. You should always refer to the ingredient list on the product package that you receive for the most up to date and accurate list of ingredients.

product	what changed?	why?
